HB 1135: Industry, Business and Labor Committee (Rep. Berg, Chairman) recommends AMENDMENTS AS FOLLOWS and when so amended, recommends DO PASS (14 YEAS, 0 NAYS, 1 ABSENT AND NOT VOTING). HB 1135 was placed on the Sixth order on the calendar.

Page 1, line 15, replace "each October first after October 1, 2000," with "October 1, 1999, the required amount of the trust fund reserve becomes a targeted amount as determined under this subsection. The solvency target is an average high cost multiple of one. The average high cost multiple is the number of years the bureau could pay unemployment compensation, based on the reserve ratio, if the bureau paid the compensation at a rate equivalent to the average benefit cost rate in the one calendar year during the preceding twenty calendar years and the two calendar years during the preceding ten calendar years in which the benefit cost rates were the highest. "Reserve ratio" means the ratio determined by dividing the balance in the trust fund reserve at the end of the calendar year by the total covered wages in the state for that year. "Benefit cost rate" means the rate determined by dividing the unemployment compensation benefits paid during a calendar year by the total covered wages in the state for that year. The computation of the reserve ratio and benefit cost rate must exclude the wages and unemployment compensation paid by employers covered under section 3309 of the Internal Revenue Code of 1986, as amended, [26 U.S.C. 3309]. Progress towards achieving the targeted amount of the trust fund reserve is measured by reducing any difference between one and the average high cost multiple of the state by an amount that is at least fourteen percent of this difference. If the trust fund reserve reaches or exceeds the targeted amount and if the calendar year annual average insured unemployment rate is above three percent and has increased one hundred ten percent of the average of the preceding two calendar years, a tax rate will be set to provide for fifty percent of the additional revenue needed for the trust fund to be derived from tax rate increases and the remaining fifty percent becomes a drawdown against the trust fund reserve. When the trust fund reserve is being rebuilt, rates will not be lowered until the target level is reached."
