

**HOUSE BILL NO. 1207**

Introduced by

Representatives K. Koppelman, Jones, Magrum

Senators Dwyer, Larson

1 A BILL for an Act to create and enact chapter 32-46.2 of the North Dakota Century Code,  
2 relating to civil actions involving asbestos; to amend and reenact subsection 2 of section  
3 28-01.3-04 of the North Dakota Century Code, relating to liability of nonmanufacturing sellers;  
4 and to provide for application.

5 **BE IT ENACTED BY THE LEGISLATIVE ASSEMBLY OF NORTH DAKOTA:**

6 **SECTION 1. AMENDMENT.** Subsection 2 of section 28-01.3-04 of the North Dakota  
7 Century Code is amended and reenacted as follows:

8 2. ~~After the plaintiff has filed a complaint against the manufacturer and the manufacturer-~~  
9 ~~has or is required to have answered or otherwise pleaded, the~~The court shall order the  
10 dismissal of the claim against the certifying seller, unless the plaintiff can show any of  
11 the following:

12 a. That the certifying seller exercised some significant control over the design or  
13 manufacture of the product, or provided instructions or warnings to the  
14 manufacturer relative to the alleged defect in the product which caused the  
15 personal injury, death, or damage to property.

16 b. That the certifying seller had actual knowledge of the defect in the product which  
17 caused the personal injury, death, or damage to property.

18 c. That the certifying seller created the defect in the product which caused the  
19 personal injury, death, or damage to property.

20 **SECTION 2.** Chapter 32-46.2 of the North Dakota Century Code is created and enacted as  
21 follows:

22 **32-46.2-01. Definitions.**

23 In this chapter, unless the context otherwise requires:

- 1       1. "AMA guides" means the sixth edition of the American medical association's "Guides  
2       to the Evaluation of Permanent Impairment".
- 3       2. "Asbestos action" means the same as that term is defined in section 32-46.1-01.
- 4       3. "Asbestosis" means bilateral diffuse interstitial fibrosis of the lungs caused by  
5       inhalation of asbestos fibers.
- 6       4. "Board-certified in internal medicine" means a licensed physician who is certified by  
7       the American board of internal medicine or the American osteopathic board of internal  
8       medicine.
- 9       5. "Board-certified in occupational medicine" means a licensed physician who is certified  
10       in the specialty of occupational medicine by the American board of preventive  
11       medicine or the specialty of occupational/environmental medicine by the American  
12       osteopathic board of preventive medicine.
- 13       6. "Board-certified in oncology" means a licensed physician who is certified in the  
14       subspecialty of medical oncology by the American board of internal medicine or the  
15       American osteopathic board of internal medicine.
- 16       7. "Board-certified in pathology" means a licensed physician who holds primary  
17       certification in anatomic pathology or clinical pathology from the American board of  
18       pathology or the American osteopathic board of pathology and whose professional  
19       practice is principally in the field of pathology and involves regular evaluation of  
20       pathology materials obtained from surgical or postmortem specimens.
- 21       8. "Board-certified in pulmonary medicine" means a licensed physician who is certified in  
22       the specialty of pulmonary medicine by the American board of internal medicine or the  
23       American osteopathic board of internal medicine.
- 24       9. "Certified B-reader" means an individual who is certified as a national institute for  
25       occupational safety and health final or B-reader of x-rays under title 42, Code of  
26       Federal Regulations, part 37.51(b).
- 27       10. "Chest x-ray" means chest films taken in accordance with all applicable state and  
28       federal regulatory standards and taken in the posterior-anterior view.
- 29       11. "DLCO" means diffusing capacity of the lung for carbon monoxide, which is the  
30       measurement of carbon monoxide transfer from inspired gas to pulmonary capillary  
31       blood.

- 1        12. "Exposed individual" means an individual whose exposure to asbestos is the basis for  
2        an asbestos action.
- 3        13. "FEV1" means forced expiratory volume in the first second, which is the maximal  
4        volume of air expelled in one second during performance of simple spirometric tests.
- 5        14. "FEV1/FVC" means the ratio between the actual values for FEV1 over FVC.
- 6        15. "FVC" means forced vital capacity, which is the maximal volume of air expired with  
7        maximum effort from a position of full inspiration.
- 8        16. "ILO system" and "ILO scale" mean the radiological ratings and system for the  
9        classification of chest x-rays of the international labour office provided in "Guidelines  
10       for the Use of ILO International Classification of Radiographs of Pneumoconioses"  
11       (2011).
- 12       17. "Nonmalignant condition" means any condition that may be caused by asbestos other  
13       than a diagnosed cancer.
- 14       18. "Official statements of the American thoracic society" means the lung function testing  
15       standards set forth in the technical standards of the American thoracic society,  
16       including "Standardization of Spirometry" (2019), "Standardisation of the  
17       Measurement of Lung Volumes" (2005), "Standards for Single-breath Carbon  
18       Monoxide Uptake in the Lung" (2017), and "Interpretive Strategies for Lung Function  
19       Tests" (2005).
- 20       19. "Pathological evidence of asbestosis" means a statement by a board-certified  
21       pathologist that more than one representative section of lung tissue uninvolved with  
22       any other disease process demonstrates a pattern of peribronchiolar or parenchymal  
23       scarring in the presence of characteristic asbestos bodies graded 1(B) or higher under  
24       the criteria published in "Asbestos-Associated Diseases", 106 Archive of Pathology  
25       and Laboratory Medicine 11, Appendix 3 (October 8, 1982).
- 26       20. "Plaintiff" means the same as that term is defined in section 32-46.1-01.
- 27       21. "Plethysmography" means the test for determining lung volume in which the exposed  
28       individual is enclosed in a chamber equipped to measure pressure, flow, or volume  
29       change.
- 30       22. "Predicted lower limit of normal" means the test value that is the calculated standard  
31       convention lying at the fifth percentile, below the upper ninety-five percent of the

1           reference population, based on age, height, and gender, according to the  
2           recommendations by the American thoracic society and as referenced in the  
3           AMA Guides.

4        23. "Product liability action" means the same as defined in section 28-01.3-01.

5        24. "Pulmonary function test" means spirometry, lung volume testing, and diffusion  
6           capacity testing, including appropriate measurements, quality control data, and  
7           graphs, performed in accordance with the methods of calibration and techniques  
8           provided in the AMA Guides and all standards provided in the official statements of the  
9           American thoracic society.

10       25. "Qualified physician" means a licensed physician who is board-certified in internal  
11           medicine, pathology, pulmonary medicine, occupational medicine, or oncology, as may  
12           be appropriate to the diagnostic specialty in question, and who:

13           a. Conducted a physical examination of the exposed individual and has taken a  
14           detailed occupational, exposure, medical, smoking, and social history from the  
15           exposed individual, or if the exposed individual is deceased, has reviewed the  
16           pathology material and has taken a detailed history from the individual most  
17           knowledgeable about the information forming the basis of the asbestos action;

18           b. Treated or is treating the exposed individual, and has a doctor-patient  
19           relationship with the exposed individual at the time of the physical examination,  
20           or in the case of a board-certified pathologist, examined tissue samples or  
21           pathological slides of the exposed individual at the request of the treating  
22           physician;

23           c. Spends no more than twenty-five percent of the physician's professional practice  
24           time providing consulting or expert services in civil actions, and whose medical  
25           group, professional corporation, clinic, or other affiliated group earns no more  
26           than twenty-five percent of its revenue providing such services;

27           d. Has not relied on any examinations, tests, radiographs, reports, or opinions of  
28           any doctor, clinic, laboratory, or testing company that performed an examination,  
29           test, radiograph, or screening of the exposed individual in violation of any law,  
30           regulation, licensing requirement, or medical code of practice of the state in  
31           which the examination, test, or screening was conducted; and

- 1           e. Prepared or directly supervised the preparation and final review of any medical  
2           report under this chapter.
- 3       26. "Radiological evidence of asbestosis" means a quality 1 chest x-ray under the  
4       ILO system, or a quality 2 chest x-ray in a death case when no pathology or quality 1  
5       chest x-ray is available, showing bilateral small, irregular opacities (s, t, or u) occurring  
6       primarily in the lower lung zones graded by a certified B-reader as at least 1/1 on the  
7       ILO scale.
- 8       27. "Radiological evidence of diffuse bilateral pleural thickening" means a quality 1 chest  
9       x-ray under the ILO system, or a quality 2 chest x-ray in a death case when no  
10       pathology or quality 1 chest x-ray is available, showing diffuse bilateral pleural  
11       thickening of at least b2 on the ILO scale and blunting of at least one costophrenic  
12       angle as classified by a certified B-reader.
- 13       28. "Spirometry" means a test of air capacity of the lung through a spirometer to measure  
14       the volume of air inspired and expired.
- 15       29. "Supporting test results" means B-reading and B-reader reports, reports of x-ray  
16       examinations, diagnostic imaging of the chest, pathology reports, pulmonary function  
17       tests, and all other tests reviewed by the diagnosing physician or a qualified physician  
18       in reaching the physician's conclusions.
- 19       30. "Timed gas dilution" means a method for measuring total lung capacity in which the  
20       subject breathes into a spirometer containing a known concentration of an inert and  
21       insoluble gas for a specific time, and the concentration of that inert and insoluble gas  
22       in the lung is compared to the concentration of that type of gas in the spirometer.
- 23       31. "Total lung capacity" means the volume of gas contained in the lungs at the end of a  
24       maximal inspiration.

25       **32-46.2-02. Sworn information form requirement for asbestos action.**

- 26       1. In addition to any requirements for asbestos actions under chapter 32-46.1, a plaintiff  
27       in an asbestos action shall file, within thirty days after any complaint is filed in an  
28       asbestos action, a sworn information form signed by the plaintiff and plaintiff's counsel  
29       specifying the evidence that provides the basis for each claim against each defendant.  
30       The sworn information form must include the following with specificity:

- 1           a. The name, address, date of birth, marital status, occupation, smoking history,  
2           current and past worksites, and current and past employers of the exposed  
3           individual, and any person through whom the exposed person was exposed to  
4           asbestos;
- 5           b. Each individual through whom the exposed individual was exposed to asbestos  
6           and the exposed individual's relationship to each individual;
- 7           c. Each asbestos-containing product to which the individual was exposed and each  
8           physical location at which the exposed individual was exposed, or if the plaintiff  
9           was exposed through another individual, to which that other individual was  
10          exposed;
- 11          d. The specific location and manner of each exposure, including for any individual  
12          through whom the exposed individual was exposed to asbestos;
- 13          e. The beginning and ending dates of each exposure, the frequency and length of  
14          each exposure, and the proximity of the asbestos-containing product or its use to  
15          the exposed person and any person through whom the exposed person was  
16          exposed to asbestos;
- 17          f. The identity of the manufacturer or seller of the specific asbestos product for  
18          each exposure;
- 19          g. The specific asbestos-related disease claimed to exist; and
- 20          h. Any supporting documentation relating to the information required under this  
21          section.
- 22          2. The plaintiff shall provide the sworn information form and supporting documentation to  
23          all parties within thirty days after the effective date of this section for asbestos actions  
24          that are pending on the effective date.
- 25          3. The plaintiff has a continuing duty to supplement the information required to be  
26          disclosed in subsection 1.
- 27          4. The court shall dismiss the asbestos action without prejudice as to any defendant  
28          whose product or premises is not identified in the required disclosures in subsection 1.
- 29          5. The court shall dismiss the asbestos action without prejudice as to all defendants if the  
30          plaintiff and plaintiff's counsel fail to comply with this section.

1       **32-46.2-03. Requirements for asbestos action.**

- 2       1. In addition to any requirements for asbestos actions under chapter 32-46.1 and the  
3       required sworn information form required by section 32-46.2-02, a plaintiff in an  
4       asbestos action shall include with any complaint a detailed narrative medical report,  
5       signed by a qualified physician and accompanied by supporting test results, which  
6       constitute prima facie evidence the exposed individual meets the requirements of this  
7       chapter. The report may not be prepared by a lawyer or other individual working for or  
8       on behalf of a lawyer or law firm.
- 9       2. The plaintiff shall provide a detailed narrative medical report and supporting test  
10      results to all parties within thirty days after the effective date of this section for  
11      asbestos actions that are pending on the effective date.
- 12      3. A defendant shall have a reasonable opportunity to challenge the adequacy of the  
13      prima facie evidence. The court shall dismiss the action without prejudice if the plaintiff  
14      fails to comply with the requirements of this section or fails to make the prima facie  
15      showing required by this section.
- 16      4. Until a court enters an order determining the exposed individual has established prima  
17      facie evidence of impairment, an asbestos action is not subject to discovery, except  
18      discovery related to establishing or challenging the prima facie evidence.

19      **32-46.2-04. Elements of proof for asbestos action involving nonmalignant conditions.**

20      An asbestos action related to an alleged nonmalignant asbestos-related condition may not  
21      be brought or maintained in the absence of prima facie evidence the exposed individual has a  
22      physical impairment for which asbestos exposure was a substantial contributing factor. The  
23      prima facie showing must be made as to each defendant and include a detailed narrative  
24      medical report signed by a qualified physician that includes the following:

- 25      1. Radiological or pathological evidence of asbestosis or radiological evidence of diffuse  
26      bilateral pleural thickening or a high-resolution computed tomography scan showing  
27      evidence of asbestosis or diffuse pleural thickening;
- 28      2. A detailed occupational and exposure history from the exposed individual or, if the  
29      individual is deceased, from the individual most knowledgeable about the exposures  
30      that form the basis of the action, including identification of all of the exposed  
31      individual's places of employment and exposures to airborne contaminants and

1 whether each place of employment involved exposures to airborne contaminants,  
2 including asbestos fibers or other disease-causing dusts, that may cause pulmonary  
3 impairment, and the nature, duration, and level of any exposure:

- 4 3. A detailed medical, social, and smoking history from the exposed individual or, if the  
5 individual is deceased, from the individual most knowledgeable, including a thorough  
6 review of the past and present medical problems of the exposed individual;
- 7 4. Evidence verifying at least fifteen years have elapsed between the exposed  
8 individual's date of first exposure to asbestos and the date of diagnosis;
- 9 5. Evidence from an individual medical examination and pulmonary function testing of the  
10 exposed individual or, if the exposed individual is deceased, based upon the  
11 individual's medical records, the exposed individual has or the deceased individual  
12 had a permanent respiratory impairment rating of at least Class 2 as defined by the  
13 AMA Guides or reported significant changes year to year in lung function for FVC,  
14 FEV1, or DLCO as defined by the American thoracic society's "Interpretative  
15 Strategies for Lung Function Tests", 26 European Respiratory Journal 948-68, 961-62,  
16 table 12 (2005);
- 17 6. Evidence that asbestosis or diffuse bilateral pleural thickening, rather than chronic  
18 obstructive pulmonary disease, is a substantial contributing factor to the exposed  
19 individual's physical impairment, based on a determination the exposed individual has  
20 any of the following:
  - 21 a. FVC below the predicted lower limit of normal and FEV1/FVC ratio (using twenty  
22 actual values) at or above the predicted lower limit of normal;
  - 23 b. Total lung capacity, by plethysmography or timed gas dilution, below the  
24 predicted lower limit of normal; or
  - 25 c. A chest x-ray showing bilateral small, irregular opacities (s, t, or u) graded by a  
26 twenty-four certified B-reader as at least 2/1 on the ILO scale; and
- 27 7. A statement that the qualified physician signing the detailed narrative medical report  
28 has concluded exposure to asbestos was a substantial contributing factor to the  
29 exposed individual's physical impairment and not more probably the result of other  
30 causes. An opinion that the medical findings and impairment are consistent with or

1           compatible with exposure to asbestos, or words to that effect, does not satisfy this  
2           subsection.

3           **32-46.2-05. Elements of proof for asbestos action involving malignant conditions.**

4           1. An asbestos action related to an alleged asbestos-related malignant condition may not  
5           be brought or maintained in the absence of prima facie evidence that the exposed  
6           individual has a malignant condition for which asbestos exposure was a substantial  
7           contributing factor. The prima facie showing must be made as to each defendant and  
8           include a detailed narrative medical report signed by a qualified physician that includes  
9           all of the following:

- 10           a. A diagnosis that the exposed person has a malignant asbestos-related condition;  
11           and  
12           b. A statement that exposure to asbestos was a substantial contributing factor to the  
13           exposed individual's malignant condition and not more probably the result of  
14           other causes, and a detailed explanation for that opinion. An opinion that the  
15           malignant condition is consistent with or compatible with exposure to asbestos, or  
16           words to that effect, does not satisfy this subdivision.

17           2. The court shall hold an evidentiary hearing and determine if the exposed person has  
18           established a prima facie showing of cancer to which exposure to asbestos was a  
19           substantial contributing factor.

20           **32-46.2-06. Evidence of physical impairment - Procedures - Limitation.**

21           1. Evidence relating to the prima facie showings required under this chapter does not  
22           create a presumption the exposed individual has an asbestos-related impairment and  
23           is not conclusive as to the liability of any defendant.

24           2. Evidence may not be offered at trial and the jury may not be informed of:

- 25           a. The grant or denial of a motion to dismiss an asbestos action under this chapter;  
26           or  
27           b. The provisions of this chapter with respect to what constitutes a prima facie  
28           showing of asbestos impairment.

29           3. Evidence relating to physical impairment offered in an asbestos action governed by  
30           this chapter:

- 1           a. Must comply with the quality controls, equipment requirements, methods of  
2                   calibration, and techniques set forth in the AMA Guides and all standards set  
3                   forth in the official statements of the American thoracic society;
- 4           b. May not be obtained under the condition the plaintiff or exposed individual retains  
5                   the legal services of an attorney or law firm.
- 6           4. In the absence of consent from all parties, a court may consolidate for trial only  
7                   asbestos actions relating to the exposed individual and members of that individual's  
8                   household.
- 9           5. A product liability defendant in an asbestos action may not be liable for exposures  
10                   from a later-added asbestos-containing product made or sold by a third party.

11           **32-46.2-07. Statute of limitations.**

- 12           1. The period of limitations for an asbestos action that is not barred as of the effective  
13                   date of this chapter may not accrue, nor may the running of limitations commence,  
14                   before the earlier of the date:
  - 15                   a. The exposed individual received a medical diagnosis of an asbestos-related  
16                           impairment;
  - 17                   b. The exposed individual discovered facts that would have led a reasonable  
18                           individual to obtain a medical diagnosis with respect to the existence of an  
19                           asbestos-related impairment; or
  - 20                   c. The date of death of the exposed individual having an asbestos-related  
21                           impairment.
- 22           2. This section does not revive or extend limitations with respect to any claim for  
23                   asbestos-related impairment that was time-barred on the effective date of this chapter.

24           **SECTION 3. APPLICATION.** This Act applies to all asbestos claims filed on or after  
25 August 1, 2021, and any claims pending on August 1, 2021, in which trial had not commenced  
26 as of that date, except the statute must be applied prospectively if retroactive application is held  
27 to be unconstitutional.
