89-08-03-01. Inspections and reports during construction of dams over ten feet [3.05 meters] in height.

To protect property and assure safety, the following are conditions to all construction permits for dams over ten feet [3.05 meters] in height:

1. An engineer must be in charge of and responsible for inspections during construction.
2. Inspections during construction must be performed at intervals necessary to ensure conformity with the construction permit and the plans and specifications.
3. The information obtained during each inspection must be documented in a written report. The report will specify any changes necessary under section 89-08-03-03. The inspection reports must be provided to the state engineer upon request.

1. Upon receipt of a written complaint that a dam, dike, or other device is unsafe because of its construction, maintenance, or operation, the state engineer will examine the available information and determine if the complaint is justified.

2. If the state engineer determines the complaint is unjustified, the state engineer must notify the complainant in writing of that fact.
3. If the state engineer determines the complaint is justified, the state engineer will complete the necessary inspection and make a determination regarding the structure's safety. If construction is ongoing, all construction activities must cease until the state engineer completes the inspection.

Except in emergency situations as determined by the state engineer, the state engineer will request permission from the landowner to enter the property.
